

beProt

mobile personal protection system

**TOP SPOT – Top 500 Innovators program alumni
success stories**

Vision: To be the market leader in fall-monitoring products

The Challenge

An accidental FALL can threaten people's health and life!

This problem mainly concerns:

- the elderly,
- people at risk of collapse because of health reasons,
- people at risk of attack because of their profession,
- lone workers.

Rapid medical response following a fall is **critical to minimize the severity of any injuries.**

Our Solution

beProt application is designed to increase safety of peoples' everyday life

Navigation

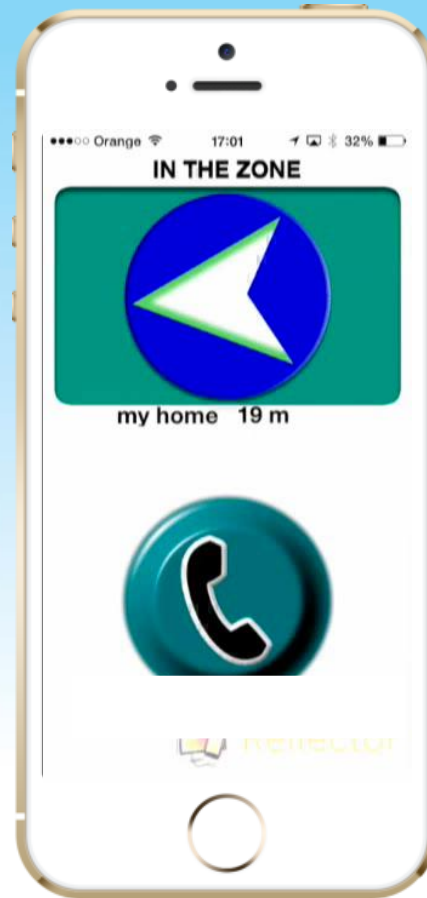

Voice call

AMBER alert

SOS message

It detects the collapse of the monitored person and provides information to the Monitoring Centre automatically

Fall detection

The product is an automatic system to detect falls threatening health and life

Where's the magic?

Highly reliable fall detection

- various forms of collapse detection, not only a tilt or a stillness,

GSM system for data transmission

- global network, outdoor location advantage,

Voice communication

- from the Monitoring Centre to verify health status of the injured person,
- by the user pressing a single button to make emergency call,

Navigation

- provided to permit safe and easy return to safety zone,
- automatic enter or abandon safety zone notification.

Development stage

Current Status:

- *beProt* application available on the App Store

Future Plans:

- integration with wrist SMARTWATCH

Thank You!
